

NAURAS JABARI

currently in **Toronto**

A full-stack web and software engineer with 10+ years of experience. My specialty lies in prototype development, AI engineering, complex UI implementation and systems integration inside the javascript ecosystem.

Employment

Software Engineer with Amera Health Solutions - independent contract

May 2025 — Jul 2025

Lead role in building a full-stack prototype for an AI-powered health claims parsing and processing platform. The product was accepted into Y Combinator (Fall 2025), where the founding team continued development.

- Highlights
- Stack includes Nuxt, Express, Bun, oRPC, Supabase
 - Implemented an AI parsing quality testing/scoring system with routing to Claude, Gemini, ChatGPT and Mistral
 - Designed as a microservices architecture to interconnect with separate .NET and python apps

Engineering Lead at Undone Ventures

Sep 2017 — May 2025

Led a growing team of 5 developers as both Engineering Lead and primary technical contributor. Delivered 30+ projects spanning bespoke frontend builds, full-stack web applications, and data-intensive tooling across 15+ clients, including [Protocol Labs](#), McGill University and more.

- Highlights
- Improved time to production by creating reusable boilerplates for static/SSR websites and web applications, increasing parallel project capacity
 - Architected full-stack applications end-to-end; blockchain data aggregation and analytics tooling, research databases with drill-down UIs, API integration pipelines, and more
 - Made pragmatic technology decisions based on project constraints, including adopting Go for high-volume data processing when Node couldn't meet performance requirements
 - Established estimation, budgeting, and delivery workflows during project discovery that directly contributed to consistent on-time delivery
 - Mentored junior engineers into intermediate roles
 - Delivered projects with comprehensive documentation and clean handoffs, enabling client teams to maintain and extend codebases independently

Web Developer and Project Manager at Pax Cultura Studios

Sep 2015 — Jul 2017

Grew into a senior individual contributor and technical lead within a fast-paced web and machine learning startup, managing multiple developers, prioritizing work streams and overseeing cross-continent code integration.

Web Developer at Sutton Compliance Communications

Mar 2015 — Sep 2015

Developed custom websites using HTML, JavaScript and CSS on a proprietary CMS. Gained end-to-end experience in the web development lifecycle, delivering projects from initial requirements through deployment.

Skills and Stack

Frontend

Vue/Nuxt React/Next TypeScript Tailwind

Wordpress SCSS WCAG Accessibility

Responsive Design

Backend

Node Bun Express Websockets oRPC Golang

Auth CSV Processing Cron Jobs

Databases

Mongo Postgres Supabase Convex

AI/LLM

Claude Gemini ChatGPT Mistral

Multi-model Routing Tool Use Structured Output

Infrastructure

Linux Git CI/CD Github Actions Docker

Education and Publications

Honours Chemical Biology, Bachelor of Science

McMaster University Aug 2009 - Jun 2014

2 peer-reviewed publications in organic chemistry [\[link\]](#) [\[link\]](#) and 1 as a software project during my time at Undone Ventures [\[link\]](#)
